

"M2M & Wireless technologies promise explosive growth in the 21st century. Since the beginning of this decade, Alcom built up a strong portfolio of leading-edge products and technologies. We have grown into a competent "Wireless partner" for each of our customers being an OEM, integrator, CEM or end-user in fields such as telemetry, telematics, vending equipment, automotive and a growing number of industrial applications. Alcom offers a wide spread of smart devices in the field of wireless and network connectivity technologies. Our modules facilitate interaction between people, devices and systems focusing on all present and future communication standards within the M2M world."
